XINNIX

The name Xinnix (C nix; see nothing) perfectly describes the result that our door systems achieve, seamless invisible doors. To achieve these doors without jambs, we use an aluminium frame that is placed into the wall.

The included hardware consist of 3D independent adjustable hinges, a Xinnix magnetic lock as well as a gasket. More than 30 different locking methods including electronic multipointlocks are possible. Our system can be used for invisible doors up to 3500 mm high (137”).
